Observations

- Login experience was very streamlined
- Homepage GUI was very minimal and simplistic
- I like how the application is split into different locations
- Registering a patient was quick and easy to do
- Very detailed regarding patient information, included multiple data points
- Overall very nicely polished application, easy to use and simple

Recommendations

- I've noticed that the GUI for the regular home page is minimalistic and modern, however when you go deeper into sections (for example, Home -> System Administration -> Advanced Administration), you'll see areas where the GUI becomes outdated and old, probably because it hasn't been updated like the more accessible pages. I hope to suggest new UI designs in another GCI task.
- When choosing gender, when clicking a gender it really isn't obvious if your choice has been selected, I think it would be easier if there are a check that appeared when you click it.
- If you could somehow verify that it's a real phone number first that would be great, I entered a phone number with 20+ digits and it still lets me enter it.
